

University of California, Irvine

The UCI Department of Psychiatry and Human Behavior faculty has a long and distinguished history of training top-notch psychiatrists in a balanced, evidence-based and patient-centered manner. Our program is based at the UCI Medical Center (UCIMC) campus and includes three inpatient units, a partial hospitalization program, two expanding and specialized outpatient clinics and a new sleep center, among other sites. These clinical sites are highly regarded among our residents, fellows and medical students. Our training program, including weekly didactics, emphasizes the importance of using a "biopsychosocial" and individualized approach to patient care. Psychopharmacologic, psychotherapeutic and integrated psychiatric care (e.g. collaborative care or telepsychiatry) is presented in a way that underscores the importance of becoming an expert in all of these areas upon graduation from the program.
