

We are a General Psychiatry program in Galveston, Texas; with clinical sites between Galveston and Houston.

Our goal is to train general psychiatrists by means of strong clinical experience and a systematic exposure to relevant knowledge from biological, psychological and social sciences. Special effort has been devoted to achieving a well-balanced program integrating theoretical learning and clinical experiences. As a university-based program in a large public/private hospital system UTMB provides a solid core of knowledge and a scientific framework as well as the number and variety of patients for a full range of clinical experiences.

We also have a Child Fellowship program headed by Dr. Christopher Thomas. Applicants can apply for the combined program that allows applicants to match into a five-year program in General and Child Psychiatry. We also take resident applicants directly to the Child Fellowship who are in their 3rd or 4th year of General residency.
