

University of Alabama at Birmingham (UAB) Psychiatry Residency

The Psychiatry Residency Program at the University of Alabama at Birmingham (UAB) offers exposure to a diverse patient population in the setting of a major academic medical center. Unique amongst academic programs, all of our training sites are within 4 blocks. This includes University Hospital, Birmingham VA Medical Center, and Children's Hospital of Alabama. Our program offers the opportunity to tailor your training to your career goals by offering opportunities in research, psychotherapy, and academic psychiatry, that give residents a head start on their careers before they graduate. We also offer fellowships in Child and Adolescent Psychiatry, Consult-Liaison Psychiatry, and Geriatric Psychiatry, giving residents the opportunity to become subspecialty trained, without having to move.
