

University of Michigan

The University of Michigan blends academic excellence and front-line clinical experience, providing primary medical care for a broad cross-section of the community, as well as tertiary care for a much larger region. The Health System stands at the forefront of innovation in such clinical areas as integration of primary medical and psychiatric care, comprehensive community psychiatry, translation of research into front-line care, and interdisciplinary clinical practice. The residency program creates an environment of both academic excellence and flexibility, with an emphasis on both education and wellness. Residents work in numerous clinical settings, including the University Hospital, Ann Arbor VA, numerous outpatient clinics, the Center for Forensic Psychiatry, and in electives focused on research and teaching. The faculty are experts in child psychiatry, addiction, ECT, C-L psychiatry, forensics, geriatric psychiatry, perinatal psychiatry, anxiety, treatment-resistant depression, and more. Residents benefit from working on interdisciplinary teams throughout their training, and there is a culture of collaboration and supportiveness. Our aim is to have residents graduate from the program and to feel prepared to pursue a fulfilling career in psychiatry on day 1 of their faculty appointment.
