

## **Gateway Behavioral Health CSB Psychiatry Residency Program**

Our community focused program emphasizes education over service and provides training in a variety of clinical settings to provide longitudinal patient care. Our residents work directly with attending physicians and receive individual mentoring and guidance as they build the skills and confidence to practice independently.

We are a hard-working, dedicated group with a genuine interest in building community relationships to better serve our patients and promote the growth of our field. We encourage discussion, welcome feedback, and foster learning through a balance of autonomy and oversight. Our board-certified psychiatrists are all engaged in active clinical practice and have expertise in a variety of areas including psychotherapy, general adult, child and adolescent, addiction, and forensic psychiatry. You will be an integral part of our team as we continue to expand our program and adapt training models to prepare you and your peers for a dynamic career of community-based practice.

One of the unique benefits of a newer residency training program is our ability to focus on the balance of clinical experience and scholarly activity. Your time is protected for formal didactics, which include case presentations, discussion of journal articles, interactive seminars, formal training in motivational interviewing as well as other forms of psychotherapy, and Applied Suicide Intervention Skills Training (ASIST). You will also have an opportunity to serve in a teaching role when working with our medical students through Mercer University School of Medicine.
