

The Psychiatry Residency at Henry Ford Allegiance Health is a four-year program accredited by the Accreditation Council of Graduate Medical Education and American Osteopathic Association.

Henry Ford Allegiance Health is an award-winning 420-bed health system that has been serving south central Michigan residents for nearly 100 years. Complementing traditional acute care services with mission-based services, we support the care continuum for all members of the community.

Our partnership with Henry Ford Health, which began in 2016, creates greater access to state-of-the-art technologies and enables physicians and other clinicians from both systems to work together in developing innovative approaches to patient care.

Through its key role in the Health Improvement Organization, Henry Ford Allegiance Health has become a national leader in forming forward-thinking community partnerships to address wellness and prevention.

Our Psychiatry Residency Program provides an integrated environment for residents to work collaboratively with staff psychiatrists and support staff, gaining a broad range of outpatient and hospital experience.
