

We are a relatively new community-based program in middle GA. This year we are expanding our residency to have 5 new interns. Our program is focused on developing innovative and practical methods to deliver outstanding psychiatric care to the population of middle Georgia. We work closely with the Macon community including an outpatient clinic for homeless individuals; we also provide education to one of the local high schools. We value the importance of educating residents of the need to maintain work/life balance to establish a rewarding and meaningful career. Since we are a small program, our faculty have the opportunity to work closely with each resident, making sure the residents have a unique developmental experience.
