

## LSU Baton Rouge Psychiatry Residency Program

At the LSU Baton Rouge Psychiatry Training Program our mission is to educate and train our class of eight residents per year to become excellent psychiatrists who are compassionate lifelong learners who value integrity and diversity among all people. We strive to focus equally on psychopharmacology, psychotherapy and social aspects of patient care. Residents get experience in our main hospital and many satellite locations including experience with: four different inpatient units, ECT, esketamine and TMS treatments, cognitive behavioral therapy, psychodynamic therapy, motivational interviewing, dialectical behavioral therapy (and many more types of therapy), a busy consult liaison service, a large emergency psychiatry department, forensics, women's mental health, addiction services, disability evaluations for unhoused patients, child and adolescent services, narrative medicine and more.
