

University of Kentucky Psychiatry Program and Integrated Child Psychiatry Track

Welcome to the University of Kentucky in beautiful Lexington Kentucky! With a strong Commitment to education and comprehensive training in a variety of settings, our goal is to train psychiatrists who are well prepared to practice in any setting and become leaders in their field. We emphasize training in integrated and collaborative care. In addition to our categorical psychiatry residency program, we have of the original six Pediatrics/Psychiatry /Child Psychiatry (Triple-Board) combined residency programs and have an Internal Medicine/Psychiatry combined residency program. We also offer an Integrated Child and Adolescent Psychiatry Track that allows students to match into both of our Adult Psychiatry residency Program and our Child and Adolescent Psychiatry Track at the same time and allows for more pediatric exposure earlier in the residency program. In addition to our residency programs we offer fellowships in Child and Adolescent Psychiatry and Addiction Medicine. We offer a diverse array of training sites in all of our programs including the VA, community mental health centers, University health clinic and a State Psychiatric Hospital in addition to our university inpatient and outpatient services. We have multiple tracks and elective opportunities that allow residents to tailor their education to their specific career interests.
