Jefferson Health Medical Education

The Psychiatry Residency Program at Jefferson Einstein Philadelphia Hospital is a four-year, ACGME-accredited program designed to prepare residents for the practice of psychiatry. Each year, we accept eight to ten qualified residents. With a program mission to serve the underserved, with an emphasis on psychotherapy, we are committed to advancing residents knowledge and skills in mental health care for a range of populations.

Our program offers comprehensive training in various psychiatric disciplines, including inpatient and outpatient care, emergency psychiatry, consultation-liaison psychiatry, psychotherapy, and community psychiatry. Residents benefit from a diverse patient population and a supportive learning environment that emphasizes both clinical excellence and professional development.

Electives are available to support your education in women's mental health care, HIV care, care of the LGBTQIA+ community, cancer care, refugee care, and others.

Key features of our program include:

– Diverse Clinical Rotations: Exposure to a wide range of psychiatric conditions, psychopathology, and treatment settings.
– Psychotherapy Training: Extensive training in various psychotherapeutic modalities to enhance therapeutic skills and treatment options.
– Mentorship and Support: Access to experienced faculty who provide guidance and mentorship throughout the residency with an emphasis on wellness and professional development.
– Collaborative Learning: Participation in interdisciplinary teams to enhance collaborative care and learning. Join us at Jefferson Einstein Philadelphia Hospital to become a part of a dynamic and innovative community dedicated to improving mental health care for as many as we can reach. Check out our website and IG page for more details!
