

## **University Hospitals of Cleveland**

University Hospitals Cleveland Medical Center's Adult Psychiatry Residency Program offers a strong foundation, mentoring and the best possible learning experience in all areas of psychiatry. Our strong fellowship programs support our residents as they explore the many sub-specialties of psychiatry. Each year we accept nine residents into our four-year psychiatry residency program, enough for you to feel like part of a larger group but small enough to stand out as an individual. We seek out candidates who are well-rounded, passionate and resilient - qualities we consider indicative of one's future as a psychiatrist, both as a practitioner and field-leaders.
